- Discord: bitdeep

## **SKILLS**

- Smart Contract developer.
- ts/js node development.
- c++/qt/voip developer in large telco systems.
- Able to prototype web3 apps with abi+web3.
- Know very well foundry & hardhat environments.

## **LANGUAGES**

- **Português** - native language
- **English** - read and write very well, able to join and understand meetings.

## **EXPERIENCE**

- Camelot.exchange
  - Smart Contract and BRC20 development.
  - Created airdrop xGRAIL users.

- *Implemented some plugins and other internal contracts in the protocol.*
- *Halted the onboarding after the ARB grant.*
- KoiPond.fi
  - Smart Contract and BRC20 development.
  - *Created their auction with buckets contracts, gauge staking contracts and also the brc20 bridge to evm. Few months work, part already in production and other being audited.*
- neoaudit.ai
  - as AI+EVM (blockchain) development with ts/node/docker.
  - *Created their smart contract audit system, one time work, that already finished and in production.*
- xexlabs.com
  - smart Contract and bridge development with Layer0 protocol.
  - *Created their erc20 and erc721 tokens contracts that is bridgeable for any Layer0 supported chain.*
  - *Also created their XEN minting contract.*
- equilibrefinance.com
  - Smart Contract development.
  - Deployed their ve(3,3) Velodrome clone protocol with some bug-fixes, like bribe fixes.
  - *Also, created various internal contracts, like bVara (an option type token).*
  - *Multiple projects delivered, all live.*
- kellerfinance.app
  - Smart Contract development.
  - Deployed their ve(3,3) Velodrome clone protocol with some bug-fixes, like bribe fixes.
  - *Refactored all contracts to use transparent and beacon proxy.*
  - *Deployed a full refactored Uniswap V3 CL solution with proxy.*
  - *One time work, already live.*

- malt.money
  - Smart Contract development.
  - *Made the conversion from 0.7 to 0.8 solidity with removal of all safe math code.*
  - *Refactored all test-cases for 0.8 version.*
  - *Few weeks of work, already done, protocol live.*
- inova.in
  - *VOIP and large scale call centers development for Brazilian Federal Government and others.*
  - *Still work here in system maintenance, remote, like 1h/day.*

## EDUCATION

- University of Hong Kong - **Web Development**
- Universidade Estácio - **Analysis and Systems Development**

## PROJECTS

- **pdf2audio-book-gen**: personal project that generates audiobooks from pdf.
- **youtube-translator**: personal project that use youtube extraction, audio translation and build final video translation.
- hardhat-advanced-deployer: a set of ts libraries to full deploy hardhat contracts immutables or in proxy mode with full verification and full state saving.
